Experience

ITILITE

January 2026 – June 2026

Software Engineering Intern

Bengaluru, Karnataka

- Designed and implemented secure self-service onboarding features, including unique onboarding links, Terms & Conditions versioning, audit logging, and configurable company onboarding workflows.
- Developed backend services using **Python**, **Django**, and **MySQL**, implementing automated email workflows, billing address collection, GST validation, and configurable account creation features.
- Built automated client data synchronization pipelines using scheduled jobs, bulk database operations, and change detection for enterprise integrations, improving reliability and reducing manual effort.
- Improved platform security and reliability by fixing production issues, implementing VAPT recommendations, preventing onboarding email verification bypasses, and enhancing server-side input validation.

Projects

GeoTrack – [PDF Docs](#) | *ESP32, LoRa, Python, React Native, AES-256, ECC*

- Designed and implemented a secure multi-hop LoRa mesh communication system using ESP32, SX1276 LoRa modules, ECIES, ECDSA, and AES-256 for encrypted off-grid communication.
- Developed a Python-based routing simulator using NetworkX and Tkinter to benchmark Controlled Flooding and Density-Aware Selective Flooding algorithms.
- Reduced forwarding overhead by up to **92.5%** while maintaining high packet delivery through duplicate suppression, TTL-based forwarding, and adaptive neighbor scoring.
- Validated the protocol on a physical ESP32 mesh network with a React Native companion application for real-time encrypted communication.

MoviesNow | *React, Django, Redis, Celery, TypeScript*

- Implemented JWT-based authentication with support for both Google login and email–password login.
- Built a social movie streaming platform with synchronized playback and real-time video meetings.
- Developed scalable Django REST APIs for movie uploads, metadata, and reviews.
- Integrated Django Channels and LiveKit for chat, meetings, and notifications.
- Implemented HLS streaming and background media processing with Celery and Redis.
- Designed modern React interfaces for movie discovery and staff moderation.

MeowAPI | *Python, WSGI, SQLite, Jinja2*

- Developed a lightweight Python web framework supporting function- and class-based routing with middleware.
- Implemented SQLite-based route persistence with emoji-enhanced developer logs.
- Added JSON/HTML helpers, dynamic route parameters, and Jinja2 templating.
- Created a cat-themed homepage with static file serving.
- Planned ASGI support for improved scalability.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS, C, C++, Assembly

Frameworks / Libraries: React.js, Django, Django REST Framework, Celery, Redis, LiveKit, Tailwind CSS, Vite, Jinja2, WebSocket, SQLite, PostgreSQL

Tools / Platforms: Auth0, Swagger, Git, GitHub, Unicorn, Vercel, Render

Concepts: RESTful API Design, Microservices, Real-time Communication, Middleware, Authentication & Authorization, Role-Based Access Control, Templating, Background Task Processing, API Documentation, Agile Development

Education

Indian Institute of Information Technology, Kalyani

2022 – 2026

Bachelor of Technology in Computer Science and Engineering (CGPA: 8.61)

Kalyani, West Bengal
